

## Cancer and COVID-19

- Cancer organisations around the world are experiencing sharp declines in funding and operational resources
- A pulse survey conducted by UICC with over 100 of its member organisations in 55 countries, revealed that almost three-quarters experienced reductions in income of anywhere from 25% to 100%. An analysis of the survey is available [in \*The Lancet Oncology\*](#).
- Cancer patients have suppressed immune systems and so due to their fears – as well as those of family members – related to COVID-19, they may cancel or delay hospital visits. A similar fear of contagion may mean that people do not seek in-person medical advice, thus delaying the start of treatment. Restrictions on travel and social distancing guidelines also represent barriers to seeking care.
- Less prevention, delayed treatment and suspended early detection programmes and diagnoses could lead to a higher number of deaths due to cancer in the months and years to come.
- For stories on specific regional challenges and responses, as well as how cancer care is adapting to and looking beyond COVID-19, [please visit the dedicated webpage](#).
