

Kingsley Ndoh

Founder & CEO, Hurone AI, United States of America

Biography

Kingsey I. Ndoh, MD, MPH is the Founder & CEO of Hurone AI, a Seattle-based MedTech startup pioneering the use of culturally sensitive AI technologies in oncology. Hurone's technology improves cancer care delivery, significantly boosting efficiency and effectiveness for oncologists. The company leverages advanced AI and cloud technologies to ensure scalable, secure, and robust healthcare solutions. The company's commitment extends to improving access to personalized cancer care and advancing biopharma research, particularly for underrepresented populations. Hurone AI actively contributes to global health equity through strategic partnerships with leading medical centers and research institutions in the United States, Brazil, Nigeria, Kenya, and Rwanda.

Dr. Ndoh is a Clinical Assistant Professor of Global Health at the University of Washington and an Affiliate Member at the Fred Hutchinson Cancer Center. Dr. Ndoh has facilitated historic access agreements with leading pharmaceutical companies for affordable cancer medicines in Nigeria, has been honored as a Union for International Cancer Young Leader, Washington Global Health Alliance Rising Star Award, and serves on key committees, such as the U.S. President's Cancer Panel.
